

## Automatic Smart Drainage System<sup>®</sup>

### Programmable Smart Drainage System

Incorporating a slide gate valve and locally programmable controller with Agri Drain's Inline Water Level Control Structure<sup>™</sup> gives users the ability to program their system on-site to open and close a valve to drain or retain water in a surface or sub-surface system on a pre-set schedule.

### Remote Control Smart Drainage System

Incorporating a slide gate valve and remotely accessible controller equipped with a modem for cellular communications with Agri Drain's Inline Water Level Control Structure<sup>™</sup> gives users the ability to remotely access their system with an online device (cell phone, tablet, laptop) to open and close a valve to drain or retain water in a surface or sub-surface system on demand.

### Remote Control Programmable Smart Drainage System

Incorporating a slide gate valve and an automatic, remotely accessible controller equipped with a modem for cellular communications with Agri Drain's Inline Water Level Control Structure<sup>™</sup> gives users the ability to remotely access their system with an online device (cell phone, tablet, laptop) to establish operating schedules based on date or water level to drain or retain water in a surface or sub-surface system.

**Options for remote control and automatic systems;** valve position, rainfall, soil moisture, flow measurement, battery level, water level, flow volume, and pump control.
